

With over 25 years of industry leadership, HealthNET is capable of bringing to you the certified expertise in **Epic** that you need to assist your organization to take full advantage of your **Epic Enterprise System**.

Our tenured Epic Certified Consultants have backgrounds in clinical, revenue cycle and pure technical infrastructure. We provide a comprehensive view of the Epic platform that reaches across applications to ensure successful system usage. We understand that your organization presents unique challenges with the capability to benefit from standards and best practices, while needing attention on your specific attributes and environmental drivers. Our skills reach across the continuum to provide a variety of implementation and optimization services. HealthNET has the skilled expertise to ensure that you optimize your use of the Epic platform.

QUALIFICATIONS

HealthNET professionals are of the highest caliber in the industry.

We take the time to ensure that our consultants are not only Epic

Certified but also skilled in critical analytical thinking and operational improvement. We bring to the table experienced consultants with backgrounds in healthcare management, clinical, finance and IT which enhances their ability to implement software with an eye for cross-application functionality. Our Leadership talent is trained in PMP and experienced in Epic Methodology.

IMPLEMENTATION AND OPTIMIZATION

HealthNET's implementation and optimization services span the entire EHR continuum positioning clients to take full advantage of their Epic Enterprise System.

Project Management

Our PM services go beyond the traditional vendor project process by adding expert leadership in system, clinical and financial focus on application design and methods, integrating Epic and non-Epic activities, vendor management, and TCO budgeting.

Design & Discovery

HealthNET guides our clients through the Epic validation process, ensuring that decisions align with both the Epic foundation system and the organization's requirements. Our workflow analysis includes a Q/A process that emphasizes best practices and

cross-application & workflow integration with functional and departmental areas. Consequently, any re-work of the Epic workflows and designs are minimized.

Applications & Methods

We have extensive experience with a wide range of methodologies that include PM, nursing informatics, governance models, Lean principles, testing, building, implementation, clinical content and documentation.

Data Migration

HealthNET understands how critical it is to have existing data available in your new platform (continued on reverse)

IMPLEMENTATION AND OPTIMIZATION (continued)

in a clean and accurate fashion. We develop and recommend migration strategies for all major databases and assist with the preferred migration approach, which may include: direct computer to computer conversion; data interpretation and abstraction, and other archival and sun setting strategies.

Testing HealthNET's testing methodology and toolkit is built upon industry best practice and supports multiple cycles of testing that spans

unit, integrated, capacity and end user acceptance. We provide the foundation to enable you to establish an efficient, comprehensive and repeatable process to support your application testing.

Reporting/BI

Our BI reporting team is focused on effective reporting that takes advantage of how new generation systems operate, e.g. automated work queues, rather than replicating old reports. Quality, compliance, MU and performance are part of our analytics work.

Training Effective utilization of your new system is paramount for a successful installation. We assess your training needs and create an optimal and achievable training program. We focus on educating your users on changes from the previous system and how to be efficient and comfortable with the processing of the new system.

Cut-Over Planning HealthNET is highly experienced at developing a cut-over plan that provides the sequence, schedule and checklist for the entire cut-over, starting in advance of go-live and including post-live activities. Our plans include all required activities both internal and with non-Epic vendors for a comprehensive view of your process.

Interoperability Our interface team is certified in Epic Bridges and experienced in a variety of interface engines. They are highly skilled in design, programming and testing to ensure effective interoperability and workflow between systems and understand applications and data.

HealthNET has a successful track record of assisting clients with large-scale and complicated system implementations with Epic. **SAMPLE ENGAGEMENTS:**

Eskenazi Health

Epic implementation project for this academic medical center, public sector with ambulatory/behavioral health in Indianapolis. Provided IT strategy and system selection with Epic. PM's, applications consultants/analysts, and interface programming on Bridges, data conversion and archiving.

Reading Health System

Provided IT strategy and system selection/contracting with Epic plus implementation planning. PM and designer for implementation of all Epic modules for large 700-bed hospital, plus 200 physicians. PM and overall strategic advisor (charter, design, budget, interfaces/

conversions, go-live planning, etc.). PM and analyst for decision support including interfacing with Epic. Lead programmer for Epic Bridges interfaces/data conversions.

Singing River Health System

Provided system selection and contracting with Epic. Implementation of all Epic modules for 2-hospital health system with 9-ambulatory clinics. Conversion from mainly McKesson applications and eClinicalWorks ambulatory EHR. Project Director for entire Epic implementation project. Led Epic certified trainers program and managed training for clinical systems.

Lahey Health

Multi-hospital health system (258 beds, plus 3 community hospitals), with large number of ambulatory clinics. Project manager for reporting and MU for Epic implementation. Lead EHR analyst for blood bank implementation with interfaces to Epic.

AllSpire Health Partners

Consortium of 7 large multi-hospital health systems, five (Lancaster, Lehigh, Reading, Hackensack, Atlantic) that use Epic. Business strategy and design for consolidated (multi-facility) Epic migration to single instance of Epic.
